Rare

Organism

Moderate Gram Negative Bacilli Seen

Interpretation:-

Rare -1-2 cells per 4-5 Oil immersion fields.

Few -1-2 cells per Oil immersion fields.

Moderate -2-4 cells per Oil immersion fields.

Many ->5-8 cells per Oil immersion fields.

Culture Observation

KLEBSIELLA SPECIES Grown in Culture $>10^5$ CFU/mL after two overnights of Aerobic Incubation at 37 Degree Centigrade.

SENSITIVITY PATTERN

Sr No.	ANTIBIOGRAM	Sensitivity
1	Group A Cefazolin (15mm)	Sensitive (17mm)
2	Group A Gentamicin (15mm)	Resistant
3	Group B Amikacin (17mm)	Intermediate
4	Group B Amoxicillin-clavulanate (18 mm)	Resistant
5	Group B Piperacillin-Tazobactam (21mm)	Resistant
6	Group B Cefepime (25 mm)	Resistant
7	Group B Ceftriaxone (23 mm)	Resistant
8	Group B Ciprofloxacin (26 mm)	Resistant
9	Group B Imipenem (23 mm)	Sensitive (23 mm)
10	Group B Meropenem (23 mm)	Intermediate
11	Group B Trimethoprim-sulfamethoxazole (16mm)	Resistant
12	Group B Colistin (11 mm)	Sensitive (11mm)
13	Group C Ceftazidime (21 mm)	Sensitive (22mm)
14	Group C Tetracyclin (15 mm)	Sensitive (17mm)
15	Group C Chloramphenicol (18mm)	Sensitive (18 mm)

Comment:-

Group A are considered appropriate for inclusion in a routine, primary testing antibiotic panel for the specific organism groups.

Group B includes antimicrobial agents that may warrant primary testing, but they may be reported when the organism is resistant to Group A antibiotics.

Group C includes alternative or supplemental antimicrobial agents that may require testing when strains resistant to the primary drugs (especially in the same class, eg, β -lactams) or for treatment of patients allergic to primary drugs or for treatment of unusual organisms

Group U ('urine') includes certain antimicrobial agents (eg, nitrofurantoin and certain quinolones) that are used only or

primarily for treating urinary tract infections. These agents should not be routinely reported against pathogens recovered from other sites of infection.

Group O ('other') includes antimicrobial agents that have a clinical indication for the organism group but are generally not candidates for routine testing and reporting.
